Structural closure passes at scale

Positive reconstructions close; deliberately broken routes are rejected

Positive closure

76,800 / 76,800 pass

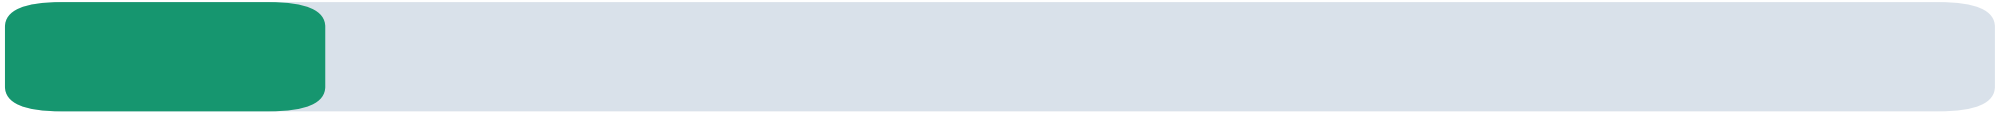
Negative controls

28,800 / 28,800 rejected

Task coverage

800 image-model tasks
9,600 block evaluations

Worst observed relative L2 versus frozen tolerance



Closure establishes structural correctness; it does not by itself establish intervention utility.
