Classifier Linear(768,1000)

↓

logit[235] = 8.0826

Signed learning image · 224 × 224

reference logit = -0.384007 Δlogit = 8.466630 sum(map) = 8.471504

The scalar classifier output has no 14 × 14 token-output panel · one fixed input, not a population claim
