Evaluation protocol

(a)

Rank attribution

Fine 4×4 cells versus native 14×14 patches

(b)

Intervene

Insertion / deletion matched fractions fixed tie seeds

(c)

Aggregate

Image-level score paired median bootstrap interval

$F = \frac{1}{2}(\text{AUC insertion} - \text{AUC deletion})$ $\Delta\text{FID} = F(\text{NNS}) - F(\text{matched})$
