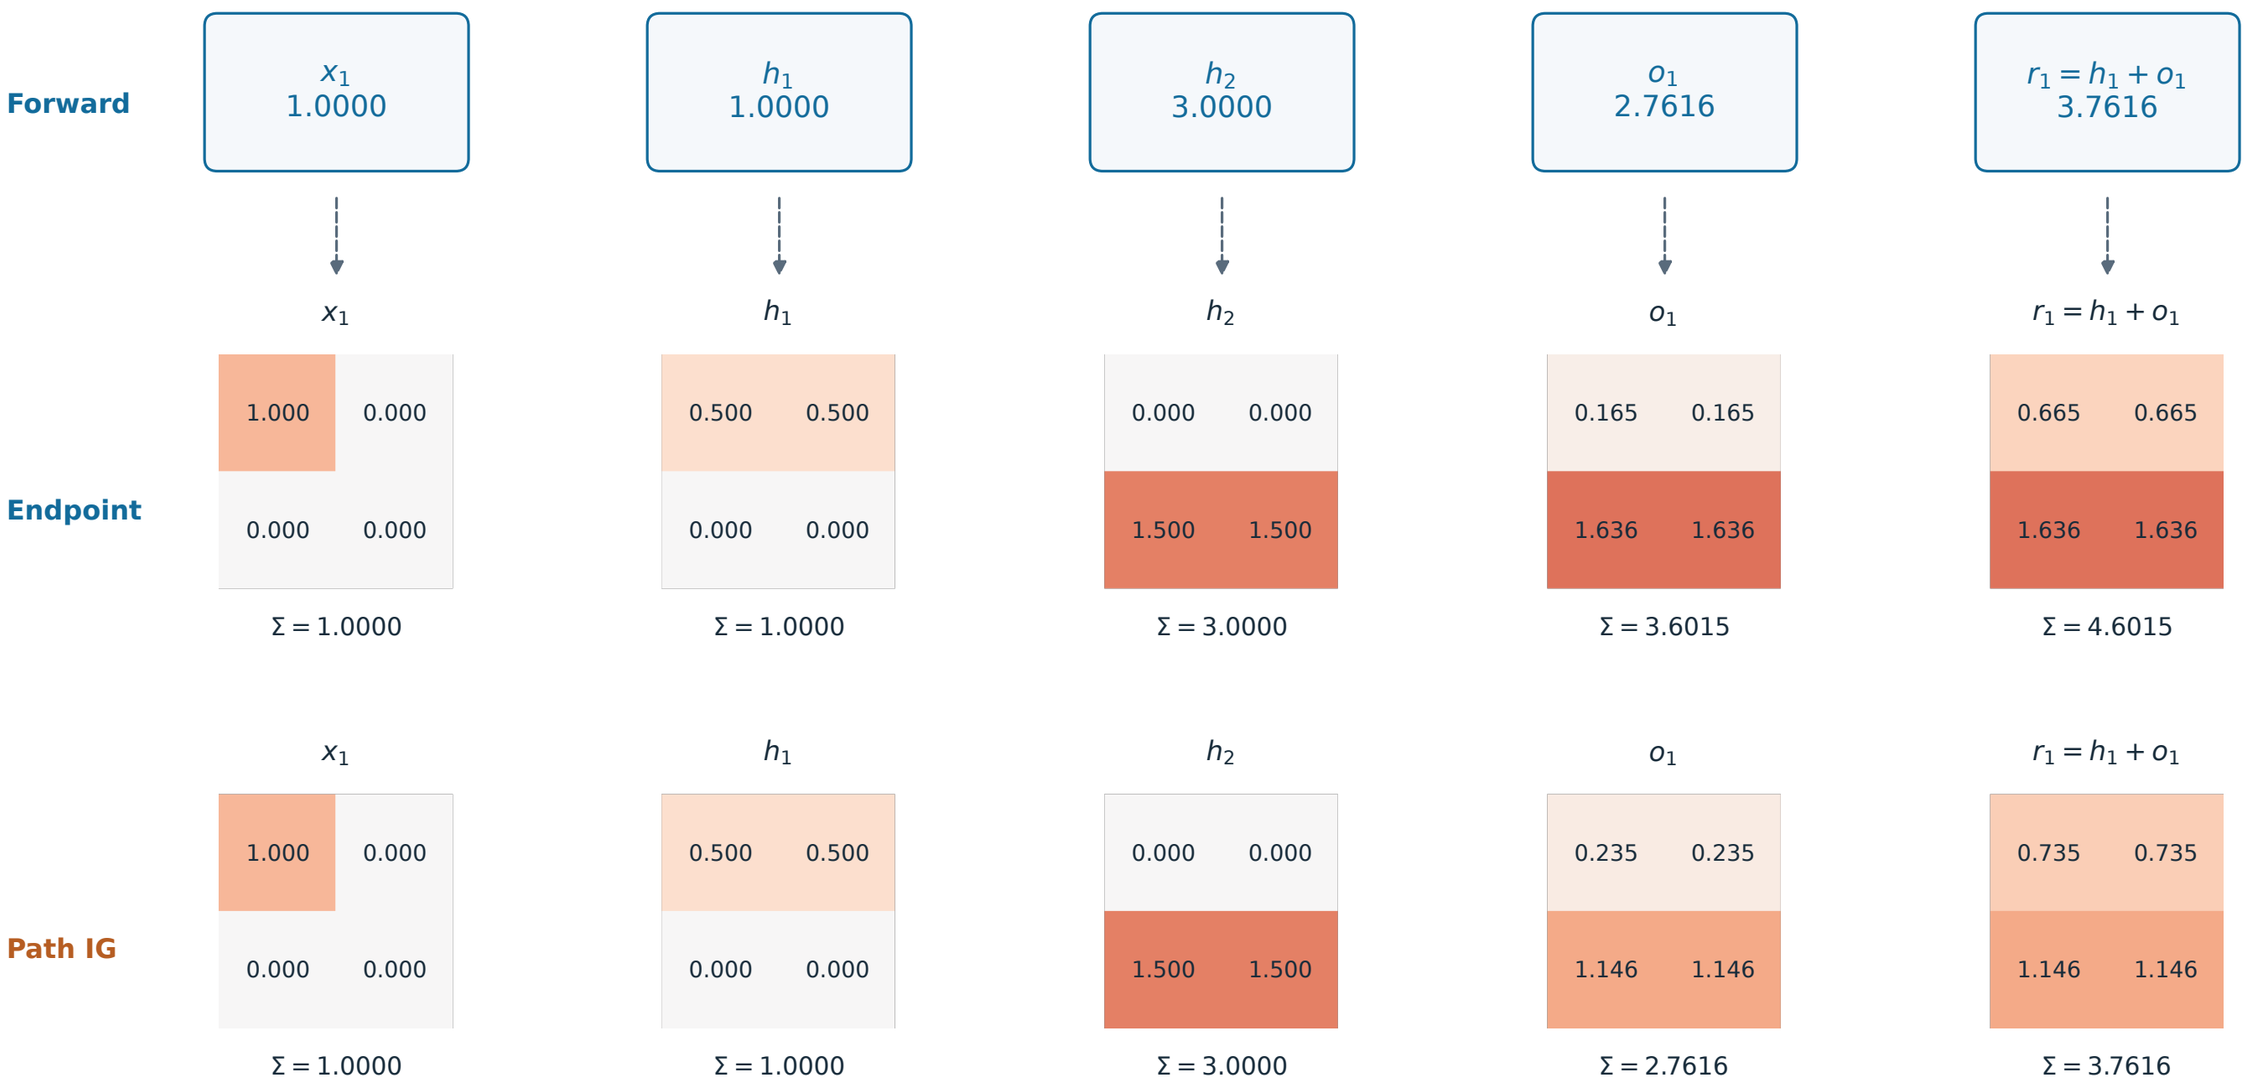
02 | Normal forward above; input-coordinate maps below

Same analytic input as the earlier figure set: x = [1, 1; 3, 3], zero reference for IG.



$$h = Px, \quad Q = K = V = h, \quad A = \mathrm{softmax}(hh^T), \quad o = Ah, \quad r = h + o$$

Each lower map explains the scalar directly above it. Patch maps agree; attention changes the path Jacobian.
