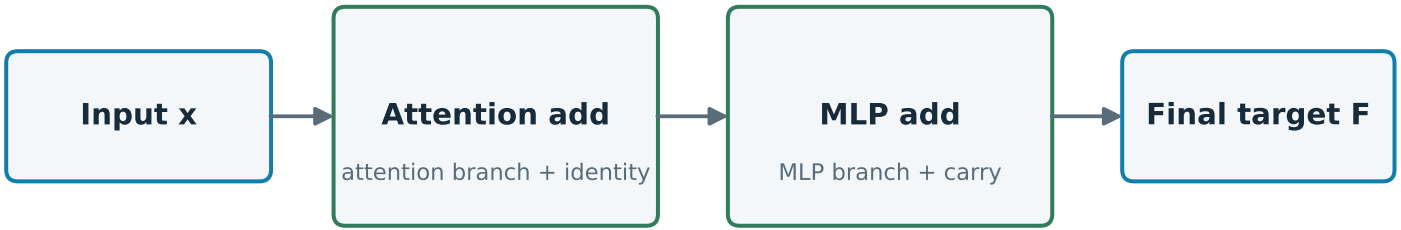
Structured closure contracts

Every cut reconstructs a named branch or total object; omission and duplication controls must fail



Heads → A_F
all attention heads

Identity + heads → L_F
first residual total

Q + K + V → A_F
attention differential branch

Routing + Value → A_F
alternative differential cut

Identity + attention → L_F
first residual

Carry + MLP → L_F
second residual

Negative controls: omit a nonzero head · omit routing · duplicate a residual path
