One image, one target, many auditable local maps

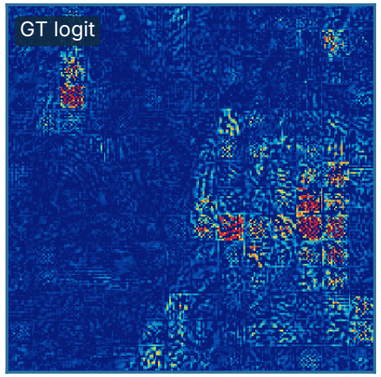

Start with the observed effect, then open it by tensor use and test each claim at the right evidence level.

OBSERVED EFFECT

Input

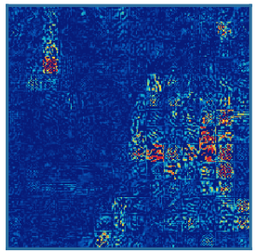

Total Endpoint

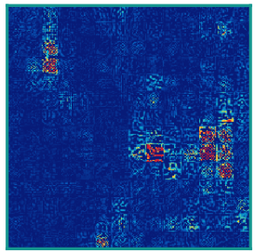

$$E_s(x) = x \odot \nabla_x s(x)$$

OPEN THE MAP BY USE · BLOCK 5

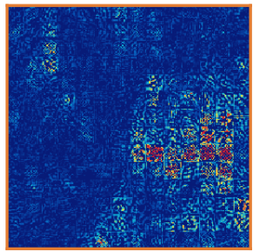

Identity

Routing

Value

$$\mathcal{L}_{e,i} = x_i[J^T_{z_e,x}\bar{z}^{(s)}_e]_i$$

routing + value = attention branch

identity + attention branch = Total Endpoint

ASK TWO DIFFERENT QUESTIONS

STRUCTURE

Does the declared cut close without omission or duplication?

UTILITY

Does a clean local map predict a specified finite replacement effect?

Closure does not imply intervention utility.
